

eyeLock®

enterprise myris™

Iris Identity Authenticator™

Forget usernames and passwords

Enterprise myris is a USB powered Iris Identity Authenticator™ that uses patented technology to convert individual iris characteristics to a unique code. myris matches the encrypted code to grant users access to corporate domain environments within seconds.

myris provides unparalleled security, is portable, light-weight and is as easy as looking in a mirror—users never have to type their username and password again.

winner

Dimensions:

Depth:	1.18in (30mm)
Diameter:	3in (78mm)
Weight:	3.2oz

On the back end, administrators can set passwords as complex as they like. Once myris is linked, they can forget them. Use myris to secure workstations, high-value transactions, critical databases and information systems for enterprises large and small.

As with all EyeLock identity authentication solutions, when you purchase myris you also receive our enrollment and iris-matching software. Enterprise customers can use the out-of-box enterprise solution to enable users to login to Active Directory accounts and other applications that require credentialing. EyeLock's robust SDK enables seamless integration with existing back-end identity management systems and applications.

eyeLock®

enterprise myris™

The most convenient and secure way to authenticate employee identity.

Features & Benefits

- Centralized authentication using EyeLock Network Matcher
- Active Directory logon
- Access type detection
(when network matcher is used, the same iris template can be used for both physical and logical access)
